NDcPP v2.2e

Allowed-with list version	4.0
Date	25 November 2025

This document contains the lists of allowed packages and PP-Modules to which exact conformance can be claimed in conjunction with the above cPP. It is used in conjunction with the 'CC Conformance' section of the cPP to provide the complete conformance statement for the cPP.

Inclusion of an object on one of these lists does not imply endorsement of the object by the NDFW iTC, nor does it imply that the relevant object has been checked for compliance with the assurance requirements applicable to a PP-Configuration or ST that uses the cPP in conjunction with the relevant object.

Conformance claims from other Protection Profiles (apart from PP-Configurations that may be defined using the PP above and the allowed objects below) are not allowed by ND cPP.
